Dexamethasone, a direct modulator of AQP2 in Menière's disease.

Menière's disease is a chronic illness characterized by intermittent episodes of vertigo associated with fluctuating sensorineural hearing loss, tinnitus and aural pressure. This pathology strongly correlates with a dilatation of the fluid compartment of the endolymph, so-called hydrops. Dexamethasone is one of the therapeutic

approaches recommended when conventional antivertigo treatments have failed. Several mechanisms of actions have been hypothesized for the mode of action of dexamethasone such as anti-inflammatory effect or as a regulator of the inner ear water homeostasis. However, none of them have been experimentally confirmed so far. Aquaporins (AQPs) are transmembrane water channels and are hence central in the regulation of trans-cellular water fluxes. In the present study we investigated the hypothesis that dexamethasone could impact water fluxes in the inner ear through direct interaction with AQP2. We addressed this question through molecular dynamics simulations approaches and managed to demonstrate a direct interaction between AQP2 and dexamethasone and its significant impact on the channel water permeability. We also describe the molecular mechanisms involved in dexamethasone binding and in its regulatory action upon AQP2 function.

Perhaps what best defines the Victorian period are the various fluctuations and developments within religious culture that punctuate its timeline. A dominant and crucial strand within Victorian society, religious culture found many expressions, particularly within the arts. The output of what we can call “devotional verse” is one very rich aspect of this culture. The most common feature of devotional verse is the presence of a speaker who seeks self-definition through a source that is felt to be external to and/or greater or other than the self. It is therefore a flexible and potentially very powerful genre—something that contributed to its wide appeal and usage during the Victorian period. A large body of religious poetry makes up this genre, and this is most frequently situated within the various branches of the Christian tradition. The broad topic of devotional verse also necessarily encompasses the huge corpus of 19th-century hymnody, which, in the Victorian period, was almost exclusively Christian. Devotional verse by general definition is, of course, not limited to the expression of religious devotion. Devotion to political causes of the period was expressed in verse form as much as devotion to a person or an idea, for example. Literary form is an important aspect of criticism on devotional verse. This is as much in the way particular forms, such as the hymn, ode, or sonnet can be identified with the devotional mode, as well as the extent to which the meaning of a poem or hymn can be shaped by its form, or indeed by its deviation from the form and its particular associations. For example, in Christina Rossetti’s *Verses (Chiefly collected from her devotional writings)* (1893), religious concepts and secular concerns come together in a devotional mode of delivery, and, as such, are classified as “devotional.” Many well-known Victorian poets are associated with the genre of devotional verse, such as Alfred Lord Tennyson, Christina Rossetti, Gerard Manley Hopkins, Elizabeth Barrett Browning, and Matthew Arnold. Some of these also wrote hymns. However, as scholarship on devotional verse increases in its breadth of interest, more “devotional” aspects of poetic writing,

as well as individual poets, are being paid critical attention. In a similar way, as scholarship on hymnody of the period expands beyond the well-known Victorian hymnists such as John Keble, “Mrs.” Cecil Frances Alexander, John Mason Neale, Reginald Heber, and Frances Ridley Havergal, so too do the parameters by which we measure the “traditional” hymn. Although the pursuit of reading and researching Victorian devotional verse is primarily a literary one, an understanding of the unique climate of religious culture during the Victorian period is helpful. The devotional verse and hymnody of this era can be said to be characteristically “Victorian” in a number of ways, particularly in the way “devotion” takes its shape, reflecting the religious, familial, political, and sexual aspects of devotion with their particularly Victorian inflections. These features do not easily cohere and are often contradictory and even oppositional in nature, reflecting the mutable aspect and continuing debates surrounding devotional verse of the Victorian period.

. The Institutional Foundation of Economic Development. Laying the Foundation for Development. Conclusion. Conclusion.

This concluding chapter looks into the practical implications of least developed countries in generating and sustaining economic developments. Sound institutions and policies, underpinned by state capacities, fulfil the critical functions of providing possibility, incentive, capability, and opportunity and thus lay a solid foundation for jump-starting and sustaining development. Other than countries that are undergoing systemic violence, states do have ample room for jump-starting growth with some basic policy changes. The chapter highlights the difficulty of sustaining growth momentum with institutional changes and growing state capacities. It acknowledges that human societies will never secure the perfect institutional foundations of development.

The chapter explores how the residents of Italian Renaissance homes responded to religious images in devotional practice. It discusses the differences between paintings and sculptures as the focus of prayer and meditation. The fundamental changes in pictorial art during the Italian Renaissance—greater realism through the use of perspective, more naturalistic settings, and the delineation of physical detail—have generally been regarded as strategies for making religious images more worldly and approachable. This book questions such an interpretation. Many families clung to older icons of the Virgin and Child, with their flattened features and gold backgrounds, long after they had fallen out of fashion artistically. Meanwhile, innovations in modes of representation helped devotees to experience meditative or visionary states of mind.

Geographic foreignness (more often imagined than not) could also transform into temporal alienation to the degree that reformers' ideal of resuscitating the primitive Church of apostolic times implied they belonged to another time. Temporal estrangement frequently figured itself as "incredulousness" at the mores of contemporary France. Though at times seeming skeptical in spirit, this incredulity proved one of "holy horror." Thus, the Reformation's sense of historical detachment did not lead to modern disenchantment. Although the religious conflicts could drive away some French sympathizers (Rabelais proves particularly instructive in this regard), Reformation attacks on credulity aimed at the traditional understanding of religion as an exchange of debts and did not harbor hidden secular impulses.
